

# 10kv solar system

## Overview

---

A 10kW solar system can produce between 11,000 kilowatt-hours (kWh) to 15,000 kWh of electricity per year. How much power a 10kW system will actually produce varies, depending on where you live. Solar panels in sunnier states, like New Mexico, will produce more electricity than solar panels in states with less.

As of January 2024, a 10kW solar energy system will cost about \$30,000 before incentives, based on the average cost of solar in the U.S.

Yes, a 10kW solar panel system will cover the average American household's energy usage of about 10,715 kWh of electricity per year. However, your home's energy needs could be quite.

The average payback period for a 10kW system can be anywhere from 8 years to 20 years, depending on where you live. Your location impacts how much your system costs, how.

Based on the average electric rate and usage in the U.S., the average homeowner can save around \$125 per month with a solar.
