

# **Albania coal-to-electricity project energy storage**

## Overview

---

As Europe's energy landscape evolves faster than a TikTok trend, Albania is stepping up with this 100-megawatt/400-megawatt-hour lithium-ion battery system, set to become operational by late 2026 [1]. This project isn't just about storing electrons – it's about rewriting the rules of energy security. Why does Albania need to import energy?

Changing weather patterns over the years have forced the country to import energy to cover domestic needs, as a lack of storage capacity requires Albania to sell its generated power during peak months of production.

Why should Albania invest in sustainable infrastructure?

Caption: Sustainable infrastructure offers great potential for Albania to harness clean energy and energy efficiency, create jobs and boost economic growth. The energy and infrastructure sector is often the economic engine driving a country's journey towards sustainable and inclusive development.

What is the situation in the development of the energy sector in Albania?

The situation in the development of the energy sector in Albania 2.1.  
Electricity production for 2023 8,796 GWh of electricity, almost 11% more than the energy consumption. Increase in production by 25.6% compared to 2022, where it was 7,003 GWh.

How can Albania solve the energy crisis?

In addition to eliminating the electricity deficit and taking electrification to new sectors, Albania can increase its potential to unlock new industries and investment using clean energy. The country can explore opportunities to produce green hydrogen through solar and wind power.

How many private energy companies are in Albania?

Currently, the number of private Albanian companies that have become part of the Albanian Electricity Stock Exchange has reached 12. Meanwhile,

together with the 5 Albanian public energy companies, which were the first to join, the total number of entities goes to 17.

Why is Albania turning to coal & oil?

But to supply Albania's growing needs, the country is increasingly turning to coal and oil. The impact of climate change and growing demands from the population have put the country's energy security firmly in the spotlight.
