

# **Base station dedicated container size specifications**

## Overview

---

What size is a munitions container?

8' wide x 8'6" high x 20' long ISO steel frame construction container. 8' wide x 8'6" high x 40' long ISO steel frame construction container. The 20-foot container is designated as the primary size for containerized munitions shipments. For sustainment and unit equipment, 20- and 40-foot ISO containers are standard.

What are the ISO container specifications?

This information is provided as a convenient quick reference only. This information is subject to change without notice and is outside of the control of Tandemloc. These ISO container specifications were developed from ISO Standards 668, 1161, 1496 and 3874, and include key details related to container dimensions and handling.

What are the dimensions of a shipping container?

Their predictable dimensions also ensure that cargo-loaded containers can be safely transported by road, sea, or rail—powering global trade as we know it today. Standard ISO shipping containers are 20-foot or 40-foot long, with a standard width of 8 feet.

How big should a container be for a mission?

For sustainment and unit equipment, 20- and 40-foot ISO containers are standard. The capability of the user to handle and transport containers will be the overriding factor when determining container size. A container modified for a specific mission must meet the requirements for the transport vehicle.

Why are standard containers called ISO containers?

The standard containers are also called ISO containers due to the flexible and multimodal applications provided by the International Organization for Standardization. Find dimensions, sizes and specifications for all shipping

container types. Find out which type of container is best suited for your shipment.
