

# Battery cell pack

## Overview

---

What are battery cells & modules & packs?

Battery cells, modules, and packs are different stages in battery applications. In the battery pack, to safely and effectively manage hundreds of single battery cells, the cells are not randomly placed in the power battery shell but orderly according to modules and packages. The smallest unit is the battery cell. A group of cells can form a module.

How a battery pack works?

In the battery pack, to safely and effectively manage hundreds of single battery cells, the cells are not randomly placed in the power battery shell but orderly according to modules and packages. The smallest unit is the battery cell. A group of cells can form a module. Several modules can be combined into a package.

What is cell to pack?

This method is said to be cell to pack, when a cell has excess charge switching allows the cells to provide a discharge current into its transformer where the energy is stored within the magnetic field. When the switch is turned off the stored energy is then redistributed into all other connected transformers, and therefore, cells.

## Battery cell pack
