

Bolivia receives orders for energy storage companies

Overview

Can a bidder extract Bolivia's lithium deposits?

The successful bidder will face a challenge in extracting Bolivia's deposits but the prize is worth it. The country has the world's biggest resources, according to the United States Geological Survey, but is the missing member of Latin America's "lithium triangle", where Chile and Argentina have done more to develop their resources.

Does Bolivia have a lithium resource?

Bolivia's lithium resources are largely untapped. Under President Luis Arce, who was inaugurated in 2020, the South American nation has sought to develop an economic model relying on the sustainable extraction of lithium to lift citizens out of poverty.

How much lithium will Bolivia produce in 2025?

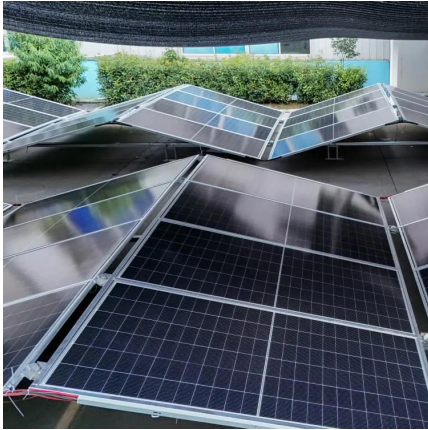

The Bolivian government anticipates producing 25,000 tonnes of lithium carbonate a year with DLE by 2025 — a target most independent analysts deem impossible. Gedan said: "Bolivia is a gamble . . . but global demand is growing so fast that hope springs eternal that Bolivia will get its act together eventually."

Who is Bolivia's biggest trading partner?

Meanwhile, China is among Bolivia's biggest trading partners, and Chinese banks and companies have financed much infrastructure in the country.
