

# **Commercial off-grid energy storage power station**

## Overview

---

What are commercial and industrial energy storage solutions?

Our commercial and industrial energy storage solutions offer from 30kW to 30+MW. We have delivered hundreds of projects covering most of the commercial applications such as demand charge management, PV self-consumption and back-up power, fuel saving solutions, micro-grid and off-grid options.

What is an off-grid car charging station?

The off-grid car charging station works as a self-sufficient off-grid power plant and can deliver the power needed to implement temporary or semi-permanent EV charging anywhere.

What can a containerized EV charging station do?

If a connection to the electric grid is unavailable the containerized charging station can integrate with renewables such as solar and wind, power generators utilizing biofuels or natural gas, and fuel cells powered by hydrogen for a completely off-grid, sustainable, net-zero EV charging solution.

What is a containerized portable power plant?

The containerized portable power plant can be configured to power all types of loads at remote locations with limited electricity supply. The system can create its own completely off-grid micro-grid environment to power anything from construction sites and datacentres to mining exploration facilities and even whole communities.

## Commercial off-grid energy storage power station
