

# **Congo solar power generation for the home market**

## Overview

---

Could solar power be the future of energy in Congo?

Congo is one of the top five oil producers in Sub-Saharan Africa. But despite its rich energy resources, the electrification rate is low, especially in rural areas, mainly because of a lack of electricity infrastructure. But solar power could be the future as it is also said to be cheaper for households.

Is a 600 MWp solar plant being built in Congo?

Sun Plus, a unit of The Sandi Group (TSG), has launched construction work on a 600-MWp solar plant in the Democratic Republic of Congo that is part of an even larger project totalling 1 GWp. The two-phase scheme, known as the Kinshasa Solar City, includes the installation of a number of solar photovoltaic (PV) parks near the capital of the country.

Does the DRC have solar power?

Solar In addition to hydropower, the DRC possesses significant potential for solar energy, offering a potential of 70 GW with noticeably high solar radiation averaging 6 kWh/m<sup>2</sup>/day.

How much power does the Congo River have?

The Congo River has the potential to bring up to 100,000 MW of hydropower capacity to the DRC, representing approximately 6% of the global energy potential and 37% of Africa's overall potential.

Is a small Solar Network a good idea in Goma?

New businesses are taking root. In several Goma neighborhoods where almost nobody had electricity just five years ago, a small solar network is offering a flicker of hope despite widespread poverty and the city's violent takeover by Congolese rebels early this year.

How much power does the DRC have?

Despite the DRC's immense endowment of varied renewable energy potential which includes hydroelectric, biomass, solar, wind and geothermal power, the current installed generating capacity is approximately 2,844 MW, providing access to merely 19% of its nearly 85 million-strong population.
