

Double glass module bipv

Overview

What is a BIPV solar module?

Our BIPV modules are also ideal for achieving Green Building certification, such as GRIHA or LEED, while reducing solar heat gain and air conditioning energy consumption. Novergy offers three types of BIPV solar modules: Double Glass PV panels, See-Through PV Glass series, and PV Colorshine (opaque) series.

What are the different types of BIPV solar panels?

Novergy offers three types of BIPV solar modules: Double Glass PV panels, See-Through PV Glass series, and PV Colorshine (opaque) series. These panels are available in various colours, dimensions, thicknesses, and shapes to meet the specific needs of each project.

What are the custom options for BIPV glass?

The custom options are so wide that you would almost wish these product would have been standardized already. The size of the glass can be varied. The largest size glass is limited by the old fashioned lamination machine. Therefore most BIPV manufacturers offers panels of approx. 2 to 3x4 meters max. The thickness of the glass can be varied.

What is BIPV & how does it work?

BIPV stands for Building Integrated Photovoltaics (BIPV) and refers to a building component which has been enhanced to perform as a renewable energy generating material in addition to being an integrated part of the architecture and building façade. Examples include windows, sunshades, spandrel glass and skylights.

Why should you choose BIPV solar panels?

These panels are available in various colours, dimensions, thicknesses, and shapes to meet the specific needs of each project. In addition to their

aesthetic appeal, our BIPV solar modules are highly efficient, generating more power per square metre and performing exceptionally well in low-light conditions.

Why should you choose BIPV?

Seamless Integration: BIPV is designed for ease of integration into the design of a building, allowing for desired combination of aesthetics and performance.

Custom Design: Partial and full layout of PV-cells allow for flexible design.

Reliability: BIPV uses proven monocrystalline silicon PV cell technology for quality, durability, and performance.
