

# **Double-glass photovoltaic panel solar modules**

## Overview

---

Double-glass solar modules are made up of two layers of tempered glass that cover both sides of the solar panel. As snow accumulates on a typical solar panel or people stomp on it (during installation), the solar cells bend dramatically, resulting in microcracks on the cells.

There is a clear distinction between single and double glass solar panels. This difference should be clear by this- .

The front surface of double glass mono solar cells has an emitter layer and the back side has a dark covering. Passivated Emitter and Rear.

Typically, solar panels have a front glass panel and a back plastic sheet. These single-sided glass panels are supported by frames across the.

## Double-glass photovoltaic panel solar modules
