

Engineering solar energy system

Overview

Solar engineers plan, design, and implement solar energy projects. They may manage anything from large-scale municipal projects to home rooftop installations. The engineer typically begins with a client consultation, site assessment, and financial assessment, which help him or her understand the project's.

Most solar engineers work in offices, but may also travel frequently to different work sites, including overseas locations. They often must climb.

According to the BLS, solar engineers, who fall under the broader BLS category of electrical and electronics engineers, earned a median.

A bachelor's degree in mechanical engineering or electrical engineering is typically required for solar engineering positions. In some areas, more advanced certification could be.

The job demand for electrical and electronics engineers is projected to increase by 7 percent between 2020 and 2030. However, the BLS predicts that job growth for solar.
