

# **Estonian new energy photovoltaic panel manufacturer**

## Overview

---

Solar Estonia is an Estonian energy company that focuses on offering renewable energy solutions. It specializes in the installation of solar panels and storage systems providing individuals and businesses with opportunities to generate clean energy and reduce their carbon footprint. Why should you install solar panels in Estonia?

The energy productivity of solar panels installed in Estonia is equivalent to the southern countries, as Estonia's cooler climate increases the efficiency of solar panels. We offer our customers turnkey construction of a solar park, starting from the design to the connection point, the construction of substations.

How much solar radiation does Estonia produce a year?

In Estonia, the amount of solar radiation is comparable to Central Europe; the average amount of radiation has an optimal slope and azimuth of 1100-1200 kWh/m<sup>2</sup>, 85% of which falls between April and October. An optimally installed 1 kW PV plant produces 900 to 1000 kWh of energy per year.

What is a building-integrated photovoltaic (BIPV) roof?

Their building-integrated photovoltaics (BIPV) serve a dual purpose as both a roofing material and an energy generator, turning sunlight into electricity. "We offer a 2-in-1 solution that is markedly more eco-friendly. Traditional methods construct the solar roof twice: initially creating a 'base roof' and adding a 'panel top layer'.
