

# **How long is the warranty period for photovoltaic energy storage batteries**

## Overview

---

Unlike solar panels or inverters, which normally carry 25-year warranties, solar battery warranties are often far shorter. The industry standard for batteries is 10-12 years; the timeframe is influenced by the battery's chemistry and rarely will manufacturers offer a warranty for longer. When do solar battery warranties expire?

Solar battery warranties typically expire when the first of three conditions are met: A solar battery's warranted life is the number of years the manufacturer guarantees the performance of the battery, typically it is set at 10 years from the date of installation.

What is a warranty on a solar photovoltaic system?

When deciding on a solar photovoltaic system, there are a variety of guarantees and warranties. The two that are most commonly referenced are the Production Guarantee and Performance Guarantee. These are easy to confuse, especially since they are often misused interchangeably.

How long is the warranty on the solar panels?

The newly launched AC comes with a solar panel that has a 25 years linear power output warranty and 10 years panel warranty. Provided with the most reliable solar panel, the AC ensures efficient cooling without any fluctuations with the least load on grid.

How long does a lithium ion battery last?

The lithium-ion batteries that dominate today's residential energy storage market have a usable life (70% capacity or more) of 10-15 years, which is roughly double the lifespan of the lead-acid batteries used in the past. However, the lifespan of a lithium-ion battery also depends on its chemistry and how you use it.

What is the longest lasting battery?

Lithium iron phosphate (LFP) has emerged as the longest-lasting battery type on the market, as indicated by 12 and even 15-year warranties (as opposed to the standard 10 years). Some of the longest-lasting LFP batteries are listed in the table below.

Do LFP batteries last longer than NMC batteries?

In general, LFP batteries tend to last longer than NMC because they are more resistant to high temperatures that degrade battery life. However, the lifespan of a battery also depends on how you use it. According to a 2020 study by the National Renewable Energy Laboratory (NREL):
