

How many watts does a multi-axis outdoor power supply have

Overview

How much power does a PoE switch use?

On one of my POE switches, I have two cameras and two access points. The APs are drawing ~5 watts each. The cameras are drawing 7 watts and 4 watts. The cameras are different models, so the variance isn't too surprising. So that's about 21 watts total on a switch with a 72 watt capacity. So there's a lot of headroom in this particular case.

What is axis 90 W midspan AC/DC?

AXIS 90 W Midspan AC/DC is perfect for installations where mains power is not an option. With a power input of either 24 V AC or 20-26.4 V DC, it can deliver up to IEEE 802.3bt (90 W) to your network device. AXIS 90 W Midspan AC/DC is plug-and-play and compatible with all Axis PoE devices which require up to 90 W power.

How much power can a Philips Hue outdoor power supply withstand?

The bottom line is that the maximum power is a little more than 70 watts, much more than the 40 watt power supply from Philips Hue should be able to withstand. But with a measuring device I was able to make interesting findings. The outdoor power supply seems to have enough reserves.

How many Watts Does a 72 Watt switch use?

The cameras are drawing 7 watts and 4 watts. The cameras are different models, so the variance isn't too surprising. So that's about 21 watts total on a switch with a 72 watt capacity. So there's a lot of headroom in this particular case. It's only an 8 port switch, so it's unlikely that I'll ever come close to maxing it out.
