

How to power the rooftop communication base station

Overview

Do base stations need a power supply?

Power Requirements: Base stations operate on 120V AC power rather than 12V DC, requiring either built-in power supplies or separate AC-to-DC converters. Size and Ergonomics: Designed for desktop use, these radios feature full-size controls, making operation more comfortable during extended sessions.

How should a rooftop shelter be selected for construction?

Sites should be selected for construction with the following consideration; cost, limited site preparation, environmental impact, public acceptance, accessibility, and future growth. Rooftop shelters require a structural engineering analysis for both initial and final configurations.

How do I stop a fire at a communication site?

An automatic photo-control switch, with a manual override, can be used to turn the lights on at dusk and off at dawn if desired. Fixtures shall meet NEMA heavy duty type classification and be UL listed for use in wet locations. The primary intent in suppressing a fire at a communication site is to protect lives. Equipment protection is secondary.
