

# **Liberia s new energy site cost price**

## Overview

---

Why does Liberia rely on imported petroleum products?

The country relies on imported petroleum products for  $\geq 90$  % of its energy consumption. This reliance on imports increases energy costs and exposes Liberia to the volatility of global fuel prices. The high cost of imported fuels poses a barrier to energy access, especially for low-income households who struggle to afford electricity services.

How much energy does Liberia produce a year?

Liberia also has abundant biomass resources, with estimates suggesting that the government can produce up to 27,452 GWh of electricity from biomass annually . Expanding these resources can provide sustainable and decentralized energy solutions, particularly in rural and remote areas.

How can Liberia expand energy access?

These resources hold immense potential, with Liberia boasting abundant solar irradiation and promising bioenergy in specific regions. Efforts to expand energy access also hinge on vital factors such as international partnerships, public-private collaborations, and innovative off-grid and mini-grid solutions.

Will Liberia get a 20 MW power supply in 2020?

In addition, the government signed a Power Purchase Agreement with a solar energy company to provide the country  $\geq 20$  MW of electricity in 2020 . Despite these efforts, much work remains to be done to improve access to reliable and affordable energy in Liberia.

What are the challenges to energy access in Liberia?

The primary challenge to energy access in Liberia is the limited and underdeveloped energy infrastructure. The lack of adequate power generation, transmission, and distribution systems contributes to this low access rate. The electrification rate is significantly lower in rural areas, where

most of the population resides .

How can Liberia improve energy reliability?

As exemplified by Liberia's import initiatives, regional energy cooperation should be considered to bolster energy reliability. Engineers are advised to optimize energy mixes, incorporating wind, biomass, and solar energy into existing grids, and developing mini-grid initiatives for rural areas to address energy access challenges.
