

Myanmar Energy Storage Power Supply Brand Ranking

Overview

Does Myanmar have energy statistics?

Myanmar also acknowledges electricity as the main power source driving economic development and addresses the need to generate and distribute more power in terms of greater volume, density, and reliability. But, so far, the country does not have national energy statistics, especially energy balance tables.

What is Myanmar's primary energy supply?

Myanmar exports a large fraction of the total primary energy produced and, therefore, the total primary energy supply (TPES) is lower than total primary energy production. Most of the produced gas is intended for export, which accounted for 78.8% in 2012, while the remaining 21.2% is utilized for domestic use.

How will electricity be supplied in Myanmar?

Electricity will be supplied for local use in accordance with the ratio of shares held by Myanmar in the joint-venture company. The agreement to set up this company is an important step in the implementation of the project. (BKK Post, 18/12/02)
