

# **Photovoltaic module export-oriented enterprises**

## Overview

---

What is the export value of PV cells & modules?

According to the statistical data, the export value of global PV cells and modules increased from approximately 54.7 billion USD to approximately 74.1 billion USD from 2012–2021, a growth of 35.5%, which was greater than that of global merchandise trade during the same period (20.3%).

What data is included in the photovoltaic industry report?

This report includes summary data for the photovoltaic industry from annual and monthly respondents. Data include manufacturing, imports, and exports of modules in the United States and its territories. Summary data include volumes in peak kilowatts and average prices.

Are trade barriers affecting Chinese exports of PV cells and modules?

According to the results in the first two columns in Table 2, compared with the trade situation between China and economies that have not initiated ACPs, the trade barriers between China and Europe and the USA has had a significant negative impact on Chinese exports of PV cells and modules.

How did antidumping and countervailing policies affect the Chinese photovoltaic industry?

Antidumping and countervailing policies from the EU and the USA significantly reduced the export volume and number of new entrants in the Chinese photovoltaic industry. Despite initial setbacks, both export volume and new entrants experienced a “V”-shaped rebound, with new firms rebounding faster and more significantly.
