

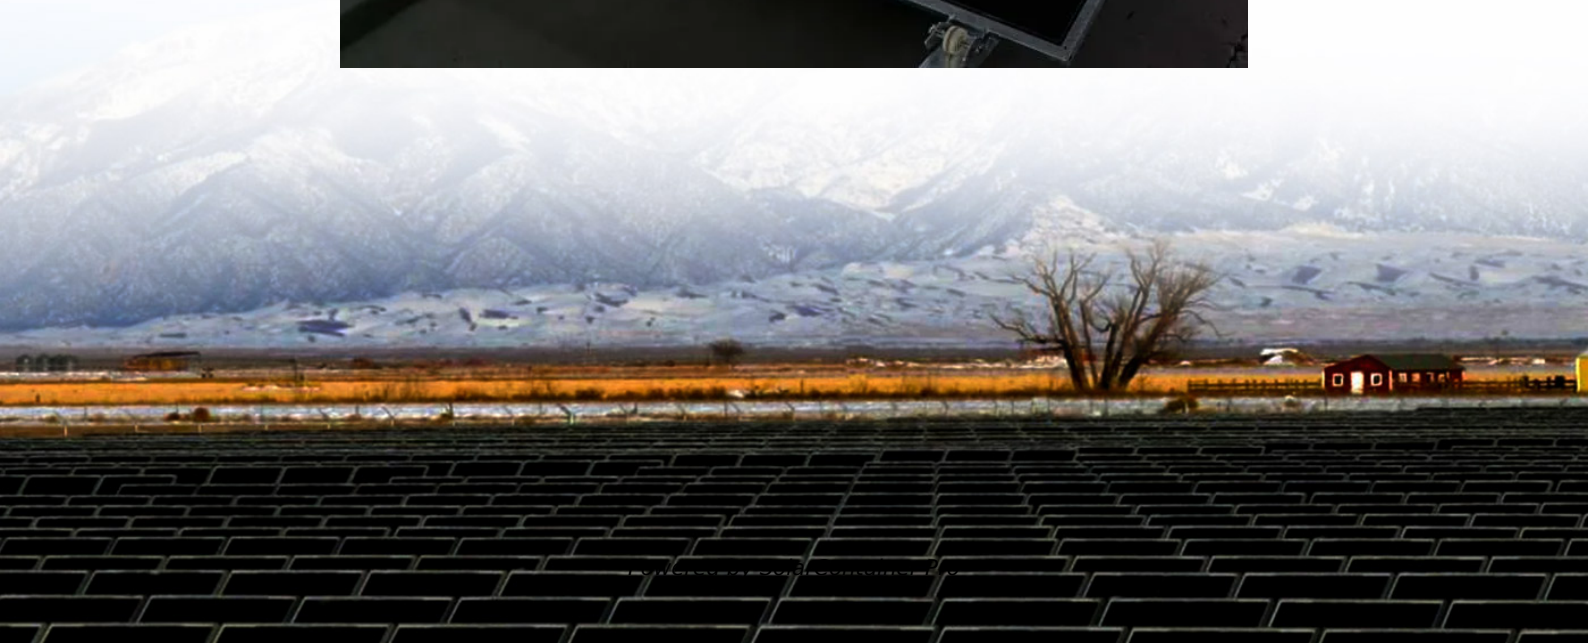

# **Photovoltaic panel electricity prices in Romania**

## Overview

---

How many largescale photovoltaic projects are there in Romania?

Here are some considerations based on this research. Romania has made significant strides in developing large-scale photovoltaic (PV) projects, contributing to its renewable energy goals. As of the latest data available, there are over 880 large-scale PV projects in Romania, boasting a cumulative capacity of approximately 46,600 MW.

What is the monitor of Romanian photovoltaic projects?

The Monitor of Romanian Photovoltaic Projects is a tool offering thorough summaries of large-scale PV projects happening all over the country. However, there are some issues that need to be carefully thought through because they could have an effect on many different groups of people.

What is the landscape of largescale PV projects in Romania?

The landscape of large-scale PV projects in Romania encompasses a wide range of installed capacities, catering to diverse energy needs and project objectives. By categorizing these projects based on their installed capacity, we gain insights into the scale and scope of solar energy deployment in the country.

Are repowering and decommissioning possible in Romania?

For most of such projects, repowering is also an option. Both these two options are on the table already for projects in operation in Romania, as they are approaching the stage where either repowering or decommissioning and recycling will be required.

Should special-purpose vehicles be incorporated in photovoltaic power plants?

Special-purpose vehicles (SPVs) are commonplace in the renewable market. In Romania, the regulations state that “the licensee may not hold two (production and operations) licences of the same type simultaneously”.

Therefore, SPVs should be incorporated into every photovoltaic power plant.
