

# **Photovoltaic panels and prices on rural rooftops in Ethiopia**

## Overview

---

How big is Ethiopia's photovoltaic potential?

The remaining ~300 GW are more evenly distributed across Ethiopia (1,000 TWh per annum for a capacity factor of 0.4). This potential is still much bigger than that from hydropower. Predicted by Swanson's law, the levelized costs for photovoltaics have plunged to levels just above that of hydropower and wind power.

Are solar panels a problem in rural areas?

But adoption is partly thwarted by a lack of good quality solar panels in rural areas. Cheap, uncertified panels break within a few years, and they are often left as garbage, creating environmental pollution, Liao said.

Is rural solar adoption a real thing?

As a result, they were poorly informed about the realities of rural solar adoption. In Addis Ababa, officials claimed that solar adoption in rural areas was close to 80%, but in interviews with townships in villages, Lee found that number closer to 20%.

Are cheap solar panels bad for the environment?

Cheap, uncertified panels break within a few years, and they are often left as garbage, creating environmental pollution, Liao said. Ongoing discussions between international organizations and the Ethiopian government seek to standardize solar panels and regulate disposal of batteries, Lee said.
