

# **Price of energy storage batteries**

## Overview

---

Thinking about adding a battery to your solar panel system?

Learn what you can expect to pay and find out if the benefits outweigh the cost.

If you're looking to buy battery storage for your solar panels, you can probably expect to pay between \$7,000 and \$18,000. Just know that the overall price range for a solar battery is even wider, with prices anywhere from a few hundred dollars to \$30,000+.

Historically, solar batteries have had a reputation for being prohibitively expensive, with many recorded instances where adding storage doubled the cost of a home solar installation. That's one reason why the majority of residential solar panel systems in the.

Solar batteries have become increasingly popular. However, it can be hard to know if a solar battery is right for you, so we put together some guidelines to help you know where you stand. Solar storage may be worth it for you if: 1. You have high electricity costs.

If you're planning to purchase one or more solar batteries, there are a few ways to save money on your purchase further down the road.

Are battery energy storage systems worth the cost?

Battery Energy Storage Systems (BESS) are becoming essential in the shift towards renewable energy, providing solutions for grid stability, energy management, and power quality. However, understanding the costs associated with BESS is critical for anyone considering this technology, whether for a home, business, or utility scale.

How much does home battery storage cost?

Installing home battery storage typically costs between \$6,000 and \$18,000, according to live pricing from solar.com's installation network. Why such a wide range?

The biggest factor is size, measured by how many kilowatt-hours (kWh) of electricity the battery can store. Battery systems can range from 5 to 40 kWh, depending on your energy needs.

How much does commercial battery storage cost?

For large containerized systems (e.g., 100 kWh or more), the cost can drop to \$180 - \$300 per kWh. A standard 100 kWh system can cost between \$25,000 and \$50,000, depending on the components and complexity. What are the costs of commercial battery storage?

.

How much does a battery cost on EnergySage?

On EnergySage, Pytes USA Energy offers some of the most affordable batteries at about \$651/kWh. You'll typically pay the most for Enphase batteries, which cost about \$1,510/kWh. \*The average price per kWh of the 10 most quoted batteries on EnergySage in the first half of 2025 (excluding Panasonic, which is closing its solar and storage business).

How much does a lithium ion battery cost?

The average price of lithium-ion battery packs is \$152/kWh, reflecting a 7% increase since 2021. Energy storage system costs for four-hour duration systems exceed \$300/kWh for the first time since 2017. Rising raw material prices, particularly for lithium and nickel, contribute to increased energy storage costs.

Is solar battery storage worth the cost in 2025?

Whether solar battery storage is worth the cost in 2025 is totally up to you and your energy goals. If you experience frequent or long-lasting power outages, then having battery storage for backup power can be a game-changer in keeping you safe, productive, and comfortable (not to mention keeping your food from spoiling!).
