

Rwanda Communication Base Station EMS Contractor

Overview

How has the trauma and EMS system changed in Rwanda?

All these activities raised the profile of the trauma and EMS system in Rwanda and have built health system capacity broadly across many areas, rather than just focused on one disease or process. Additional partnerships in other clinical departments including anesthesia, emergency medicine, and critical care have grown.

What is trauma and EMS capacity building in Rwanda?

In summary, trauma and EMS system capacity building in Rwanda, based on meaningful and deliberate engagement across academic institutions, hospitals, public services, and policy makers, has been an example of horizontal capacity building.

Can multidisciplinary collaboration improve trauma and EMS capacity in Rwanda?

However, care at the hospital level depends on improved access to emergency services. There is no established model for facilitating trauma and EMS system capacity in LMIC settings. This manuscript describes our model for multi-disciplinary collaboration to advance trauma and EMS capacity in Rwanda, along with our lessons and recommendations.

How can we facilitate trauma and emergency systems in Rwanda?

Our collaboration to facilitate trauma and emergency systems in Rwanda was highly productive across the three central themes: creating a shared mental model, improving clinical service delivery, and investing in systems infrastructure, and therefore may be translatable to address the need for trauma and emergency systems in other contexts.

Is Rwanda addressing trauma and noncommunicable diseases?

The Ministry of Health of Rwanda (MOH), having successfully reached the

Millennium Development Goals (MDGs), has prioritized addressing trauma and noncommunicable diseases. Rwanda has a population of roughly 13 million people with 70 percent below 40 years of age [].

Does VCU support anesthesia and critical care education in Rwanda?

VCU and the University of Virginia have partnered to support anesthesia and critical care education in Rwanda through an observer ship program for anesthesia residents and an operational research course based on the WHO SORT-IT to develop long-term research capacity.
