

# Self-built solar photovoltaic system

#### **Overview**

Most homeowners that want to install solar end up finding an installation company, but that isn't the only option. Do-It-Yourselfers with a strong background or experience in electrical contracting would be able to complete a successful DIY solar project from start to finish after careful research and planning.

You have three choices for solar energy systemsto power your homes and property: During the research and planning phase of.

In a rapidly expanding renewable energy supplies market, you have many choices for every component you must integrate to make your DIY solar system work efficiently during its.

A do-it-your-way solar project has several disadvantages, too. Here are the major cons to a DIY solar project: 1. Build-your-own from scratch solar array requires advanced technical knowledge and expertise that you may not have. 1. DIY solar home kitsare.

Because purchasing a solar array is a significant investment, it's imperative that you thoroughly research your options and weigh the advantages versus the disadvantages. Here are the major pros of a DIY solar project:

A DIY solar kit allows you to self-install a fully functional solar energy system for your home. DIY solar electricity is essentially the same as a solar system installed by a contractor, you're just doing the installation yourself!
