

Solar outdoor remote site energy prices

Overview

How much does an off-grid solar system cost?

An off-grid system costs between \$45,000 and \$65,000, with an average price closer to \$55,000. Cost varies based on your system size, type, and energy needs, as well as the components you choose. How long do off-grid solar systems last?

An off-grid system can last 25 years or more with proper maintenance.

Does an off-grid solar system work with a large home?

Yes, off-grid systems work with any residential home, even larger ones. Off-grid systems work best for remote homes or those with limited access to utility power. Due to their size and power capacity, off-grid systems are more expensive than grid-tied solar systems.

Do on-grid solar panels reduce electricity costs?

Though on-grid systems do reduce your electricity costs by relying mostly on solar energy, you still need grid-tied power when your solar panels aren't in use or sun hours are limited. An off-grid system lets you generate all of your own energy. This means you won't receive backup power from the grid during power outages or low-sunlight days.

Should you install an off-grid solar energy system?

When you install an off-grid solar energy system, you won't depend on an external provider for electricity. This gives homeowners peace of mind, knowing their home will continue operating smoothly during emergencies. Going off-grid means no longer relying on utility companies and their fluctuating electricity rates.

Where can I get technical support for my solar system?

We pride ourselves on providing the best technical support in the industry.

Call toll-free (877) 297-0014 for expert assistance. Low wholesale prices on complete enclosed off-grid solar systems for radio, data, monitoring & other industrial applications. Over 20 years of experience.
