

# **Solar system home costs in North Africa**

## Overview

---

Here's how much a solar power system will really cost you: Solar systems can range from R63k to R188k, depending on your home's size and needs, but with savings on electricity costs are usually recouped in three years. How much does solar cost in Africa?

Stand-alone solar PV mini-grids have installed costs in Africa as low as USD 1.90 per watt for systems larger than 200 kilowatt. Solar home systems provide the annual electricity needs of off-grid households for as little as USD 56 per year, less than the average price for poor quality energy services.

Where are solar panels installed in Africa?

Most of the grid-connected residential solar PV systems in Africa are installed either in North African countries or in South Africa. Tunisia and South Africa in particular have established markets, while Morocco has successfully used solar PV to electrify villages. These markets have competitive costs compared to OECD countries.

Are solar home systems a good investment for Africa?

Solar home systems provide the annual electricity needs of off-grid households for as little as USD 56 per year, less than the average price for poor quality energy services. IRENA estimates that with the right enabling policies, Africa could be home to more than 70 gigawatts of solar PV capacity by 2030.

How much solar PV is installed in Africa?

IRENA data and statistics show that Africa's total cumulative installed capacity of solar PV jumped from around 500 MW in 2013 to around 1 330 MW in 2014 and 2 100 MW at the end of 2015 (Figure 7). Total installed solar PV capacity therefore more than quadrupled in two years.

What is the largest solar PV market in Africa?

This is an important issue, because although the utility-scale grid-connected solar PV market is the largest market in Africa in terms of MW deployed, the of-grid market is the largest in terms of number of systems deployed (IRENA, 2015b). The of-grid market comprises SHS and mini-grid systems.

How much does a solar system cost in Kenya?

Kenya Renewable Energy Association also pointed out that, “The average solar PV system size for households in Kenya is 25-30Wp. The typical cost of installed systems is about 12 USD/Wp installed” (KEREAA, n.d.). At the distributor level, price data for SHS provide useful insights into the different capabilities and costs of different systems.
