

# **Southern Europe Lithium Battery Site**

## Overview

---

Who manufactures lithium batteries in Europe?

As part of Seri Industrial S.p.A., FAAM operates the first mass production facility for lithium batteries in Southern Europe. Founded in 1974, the company has established itself as a significant contributor to Europe's energy transition through its eco-friendly manufacturing processes and sustainable battery solutions.

How are European lithium battery manufacturers addressing geopolitical turbulence?

European lithium battery manufacturers are intensifying efforts to localize production, align with EU regulatory objectives, and safeguard their supply chains from geopolitical turbulence. Marcus Williams delves into the current landscape with Basquevolt, Inobat, and LG Energy Solution.

Is Europe achieving self-sufficiency in lithium batteries & EVs?

While North America is making strides, with substantial investments aimed at achieving self-sufficiency in lithium batteries and EVs, Europe has yet to reach a comparable level. Despite this, Europe is gaining momentum, with several prototype and full-scale battery plants underway.

Is European lithium from thermal water a reality?

European lithium from thermal water is already a reality. Since the EU has been focussing more on self-sufficiency in the critical raw material lithium, a number of new mining projects have been created. Often, the production facilities for lithium hydroxide, which is needed for battery production, are also being planned.

Where are Europe's battery plants located?

Despite this, Europe is gaining momentum, with several prototype and full-scale battery plants underway. Volkswagen Group's PowerCo is establishing

gigafactories in Germany, Spain, and Canada, while Northvolt is supplying Volvo and expanding its presence in Sweden and Belgium.

Who are the partners for a lithium-ion battery project?

Among the partners for this project are Volkswagen, InoBat Auto, and CATL. This facility will focus on producing state-of-the-art lithium-ion batteries for electric vehicles and is expected to create around 4,000 jobs. Additionally, there are other projects in the early study or development phase.
