

Spanish container energy storage

Overview

What is energy storage in Spain?

It targets large-scale energy storage projects in Spain. It focuses on technologies like standalone battery energy storage systems (BESS), pumped hydro energy storage (PHES), and thermal energy storage. The program supports hybrid projects, which combine storage with renewable energy, such as solar or wind farms.

How will Spain increase its energy storage capacity?

Spain has launched an ambitious €700 million (around \$796 million) program to increase its energy storage capacity. This plan will add 2.5 to 3.5 gigawatts (GW) of storage. It includes pumped hydro, thermal energy storage, and battery systems.

Will Spain start a new energy storage scheme?

The Ministry of the Environment of Spain has launched its latest financial support scheme for energy storage, aiming to kickstart 2.5-3.5GW.

How will Spain invest in energy storage?

This will include battery and pumped hydro plants, as well as potentially some thermal storage associated with concentrated solar power technology, which Spain is a leader in. The Spanish government is also looking to create an energy storage value chain within a €1 billion investment program.

How long does it take to build energy storage in Spain?

Projects will need to be built within 36 months of being granted the aid, with a final commercial operation date no later than 31 December, 2029. Spain is targeting around 22.5GW of energy storage by 2030 as part of its National Energy and Climate Plan (NECP).

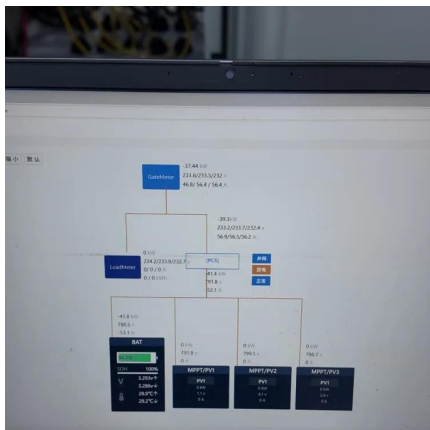

Which energy storage projects are eligible?

It is open to standalone battery energy storage system (BESS) projects, thermal energy storage projects and pumped hydro energy storage (PHES) projects as well as those that are hybridised with renewable generation facilities. Eligible costs include civil works, storage systems, auxiliary equipment and systems and related expenses.
