

The cost of installing photovoltaic panels in Israel

Overview

The installation cost of photovoltaic panels in Israel can vary between €6,500 and €30,000, depending on the system size, type of panels chosen, and associated installation costs. This amount can be a barrier for many households and businesses looking to adopt this solution. How long does it take to install solar panels?

According to Dani Waxman, an American-born homeowner in the Nofei Aviv neighborhood of Beit Shemesh, the process between ordering the panels and installing them took a little over three months: "I ordered the panels in mid-November and the installation was completed by the end of February," he says.

Are solar panels a good investment?

Between the annual return and tax exemptions, solar panels can bring owners a yearly ROI of more than 10%. However, at the moment, those who own private homes and office buildings are most likely to benefit from this unique investment route, while it remains unprofitable for those who own apartments in shared buildings.

Can you put solar panels on an apartment building?

While legally, there is nothing stopping apartment owners from doing this in the exact same way as private homeowners, they need to first get the consent of at least two-thirds of the other apartment owners in the building. Because of this technical detail, it is far less common to see private solar panels on apartment buildings.

What is NREL's PV cost benchmarking work?

NREL analyzes the total costs associated with installing photovoltaic (PV) systems for residential rooftop, commercial rooftop, and utility-scale ground-mount systems. This work has grown to include cost models for solar-plus-storage systems. NREL's PV cost benchmarking work uses a bottom-up approach.
