

Togo uses energy storage system

Overview

How is energy used in Togo?

Total energy supply (TES) includes all the energy produced in or imported to a country, minus that which is exported or stored. It represents all the energy required to supply end users in the country.

Where does Togo import electricity from?

Togo generates some of its own electricity but imports the majority of its needs from Nigeria and Ghana. The majority of Togo's generation capacity is thermal. The page below gives an overview of the energy sector in Togo.

What are the different types of energy transformation in Togo?

One of the most important types of transformation for the energy system is the refining of crude oil into oil products, such as the fuels that power automobiles, ships and planes. No data for Togo for 2022. Another important form of transformation is the generation of electricity.

How will Togo transform in 2022?

No data for Togo for 2022. Another important form of transformation is the generation of electricity. Thermal power plants generate electricity by harnessing the heat of burning fuels or nuclear reactions – during which up to half of their energy content is lost.
