

Uruguay energy storage power supply sales price

Overview

Is Uruguay a net importer of energy?

Once a net importer of energy, Uruguay now exports its surplus energy to neighbouring Brazil and Argentina. In less than two decades, Uruguay broke free of its dependence on oil imports and carbon emitting power generation, transitioning to renewable energy that is owned by the state but with infrastructure paid for by private investment.

Why does Uruguay have a power grid?

In the same way Uruguay's abundance of wind and rivers proved fortuitous for energy sovereignty, so was the government's oversight of the electric grid.

Does Uruguay have fossil fuels?

A relatively small nation spanning 175,000 square kilometres (76,568 square miles) with a population of 3.4 million – 96% of whom live in urban centres – Uruguay has no significant fossil fuel reserves. Fortuitously, its geography makes it ideal for utilizing powerful rivers and uninterrupted grasslands for wind energy.

Why did Uruguay start using wind turbines?

Avoiding nuclear power entirely, Uruguay first embraced wind turbines as a source of cheap, reliable power; providing 40% of the country's capacity in less than a decade.
