

What are the energy storage power stations in Vanuatu

Overview

Does Vanuatu have a low electricity access rate?

Vanuatu currently has one of the lowest electricity access rates in the world. Under the RESSET project, New Zealand will serve as the lead donor, providing the majority of funding for the installation of solar arrays and battery storage systems on Efate, near Port Vila, and the island of Tanna.

How does electricity work in Vanuatu?

In Vanuatu's main urban centers of Port Vila and Luganville, electricity is delivered through grids, which distribute electricity generated at power plants to homes and businesses using power lines and underground cables. Some areas on the islands of Tanna and Malekula also have limited access to grid electricity.

Will solar power boost Vanuatu's energy independence and climate resilience?

The project aims to support the use of solar power and battery storage on the islands of Efate and Tanna, boosting Vanuatu's energy independence and climate resilience. New Zealand's Deputy Prime Minister and Minister for Foreign Affairs, Winston Peters, confirmed the country's commitment during a press conference held in Port Vila on Wednesday.

Does New Zealand support Vanuatu's climate and energy priorities?

The New Zealand Government is increasing its support for Vanuatu's climate and energy priorities through a major investment in the Renewable Energy Solar and Storage on Efate and Tanna (RESSET) project. This initiative responds directly to Vanuatu's national climate goals and energy needs by improving access to clean and reliable electricity.

What does reset mean for Vanuatu?

RESSET marks a clear and practical step toward a more sustainable and secure energy future for Vanuatu, reflecting national priorities and the

continuing cooperation between Vanuatu and New Zealand in tackling climate challenges.
