

Where are the EMS communication base stations in Germany

Overview

All public emergency services in Germany (i.e. EMS, fire, police, disaster response) use the same radio system for communication. Thus, they can connect to each other with their radio equipment. Since the 1950s the units were equipped with radios in the 4m frequency band, handheld units work in the 2m band. This analog radio usage is protected by law for emergency use only. Rel. Overview Emergency Medical Service (German: "Rettungsdienst", lit. "Rescue Service") in is a service of.

The development of ambulance services in Germany started in the late 19th century. Typically volunteer aid organizations, some private companies in larger cities and so called rescue corps provided ambulance services m.

In Germany the individual states are legally responsible for the provision of emergency services, but typically delegate these responsibilities to the district level (). Municipalities, including b.

The European emergency number for the fire brigade and emergency medical services, also in Germany, is 112. This number can be called toll-free from any phone (fixed-line, mobile or phone booth). The Germa.

Why do emergency services use the same radio system in Germany?

This clears the radio channel of lengthy calls. Theoretically, no additional radio traffic is required when using such a system. All public emergency services in Germany (i.e. EMS, fire, police, disaster response) use the same radio system for communication. Thus, they can connect to each other with their radio equipment.

How does EMS work in Germany?

As in many other places, in Germany, the EMS system performs two major functions: Emergency services – Responding to all calls concerning immediate danger to the life and/or health of a person. This is the core component of the service, which is called Notfallrettung or Rettungsdienst in German.

Does Germany have a decentralized emergency management system?

Germany has a decentralized emergency management system, meaning that the state delegates EMS authority to its provinces and the provinces delegate EMS authority to their regions, cities and communes. Regional Emergency Medical Systems, as described above, are the primary tool of medical civil defense during disasters.

How are EMS vehicles dispatched in Germany?

There are two different strategies used in dispatching EMS vehicles in Germany; the Rendezvous system and the Station system In this model, the emergency ambulance (RTW) and Doctor's car (NEF) are not necessarily colocated. In most emergencies, only the ambulance is deployed for providing patient care and transport.

What is emergency medical service in Germany?

Emergency Medical Service (German: "Rettungsdienst", lit. "Rescue Service") in Germany is a service of public pre-hospital emergency healthcare, including ambulance service, provided by individual German cities and counties. It is primarily financed by the German public health insurance system.

What does a paramedic do in German EMS?

In German EMS system, the first level of pre-hospital emergency care is given by paramedics, in life-threatening situations backed up by an emergency physician on scene. Thus the paramedic scope of skills include a set of advanced life support (ALS) treatments, they have to work until an emergency doctor is on scene.
