

Wholesale price of grid-side energy storage vehicles

Overview

Are grid feed-in schemes economically viable?

For operators of small plants, who will initially be affected the most, all of the proposed grid feed-in schemes are economically nonviable. This includes schemes with grid feed-in at market value minus a marketing fee of €0.004/kWh, or self-consumption subject to additional taxes and fees.

What is the gross expansion corridor for PV systems?

The EEG 2014 specified a gross expansion corridor of 2,400 to 2,600 MW per year and a monthly degression of 0.5%. Although EEG feed-in tariff levels for PV systems will initially remain unchanged in January, the adjustment mechanism has been adapted to react more quickly to changes in the market.

What is the demand for small PV arrays with storage systems?

There is good demand for small PV arrays with storage systems, and profits are steadily rising in the segment. Although there is good demand for small PV arrays with storage systems, and profits are steadily rising in the segment, this can hardly be called a boom.
